AI PORTFOLIO RISK COPILOT

−$9,690

from one question —
"What if the AI bubble bursts?"

Anna holds $100,000 across 15 investments. When the AI bubble makes headlines, she can read the news — but not what it would cost her. So she guesses.

EVIDENCE

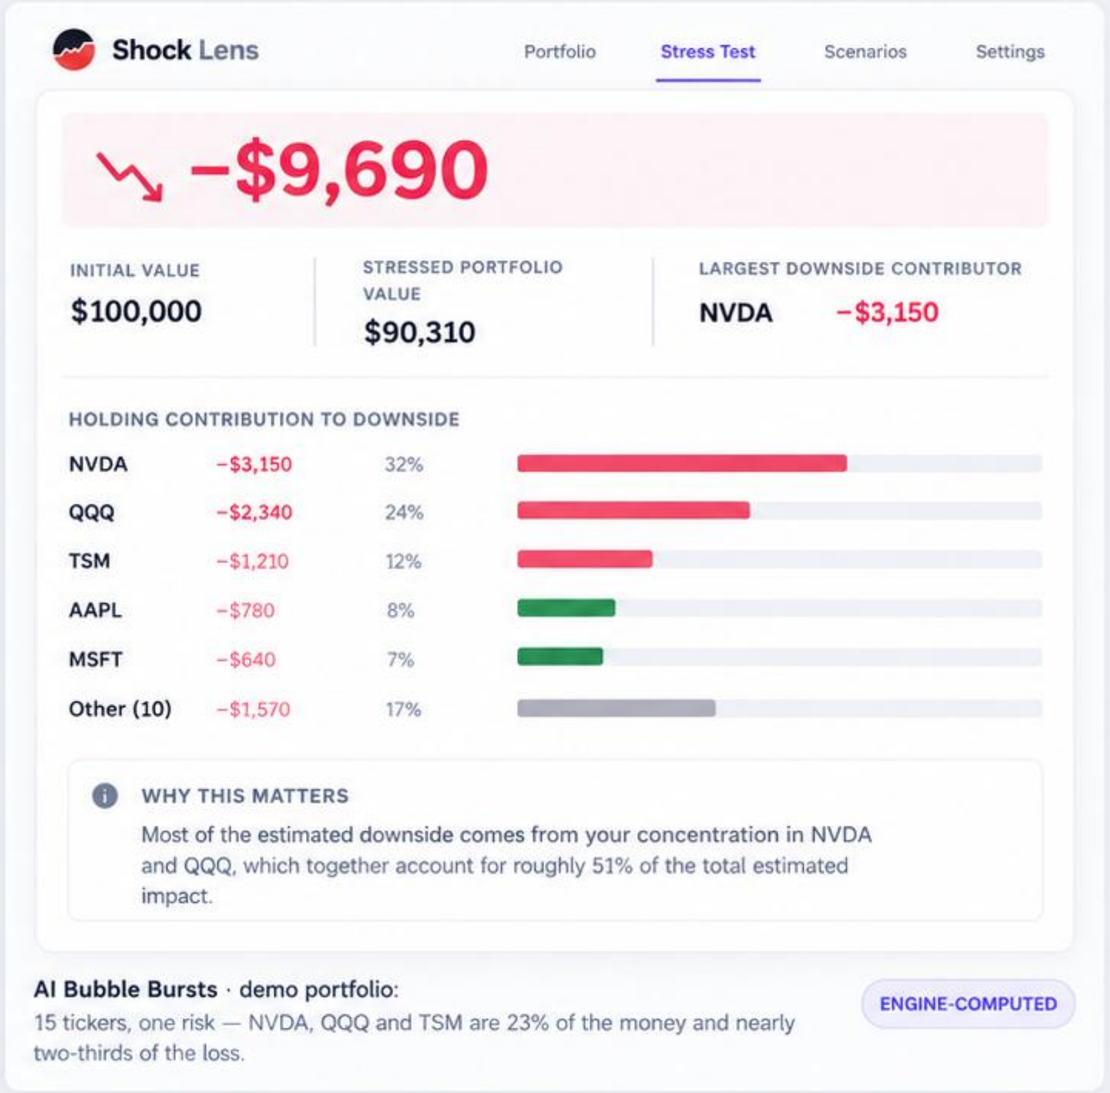

Prediction markets price it: AI-bubble burst by Dec 2026 → **7%** (Polymarket, ~$3.2M traded, retrieved 4 Oct 2026). One click later: **−9.7%.**

SOLUTION Any "what if" → dollar impact + which holdings drive it. **AI interprets; math measures; every number auditable.**

BUSINESS **Free for investors.** Brokers pay a per-client fee — informed clients panic less and leave less.

SCALE One broker integration reaches all its clients; new scenarios are data files, not builds; marginal cost is AI compute. **Pilot ask: one platform.**

Today, Anna guesses.
With Shock Lens, she sees it first.

AI Bubble Bursts · demo portfolio:
15 tickers, one risk — NVDA, QQQ and TSM are 23% of the money and nearly two-thirds of the loss.

ENGINE-COMPUTED

Sources: Polymarket "AI bubble burst by December 31, 2026?" (7% Yes, ~$3.2M volume, retrieved 4 Oct 2026); Shock Lens app run on the bundled demo portfolio (Global Multi-Asset, $100k) — scenario shocks are illustrative assumptions, all portfolio impact computed by the deterministic engine, not the AI.

Not investment advice.
